

Disperses Iron Oxide, Limescale, Flux and other system debris.

Our unique high performance BM3 formula is great news for service engineers. It delivers outstanding system cleaning results and, by using the BM3 test strips, allows the service engineer to get an accurate reading of cleaner levels in the system.

By simply dip testing a BM3 test strip in system water the engineer can check:-

Pre-Flush - cleaner dosage levels are sufficient for an effective flush

Post-Flush – if the flush has been successful or should be repeated

BM3 is a premier formula for use in accordance with BS7593:2006.

The fast acting formula has outstanding qualities:-

- Excellent limescale dispersal rates
- Excellent iron oxide dispersal rates
- Compatible with all flushing equipment
- Phosphate free formula – (Phosphate can damage pump bearings)
- 500ml bottle treats a 100 litre system

Use in conjunction with a BoilerMag magnetic filter and BM1 inhibitor to maximise heating efficiency

Part numbers: Cleaner BM3, Test Strips BM3FI
