Electric Boilers

INTRODUCTION

Please read the whole manual before attempting installation and follow these installation instructions carefully following the correct operating instructions to ensure longevity of this Strom Electric Boiler. These instructions must be conserved and given to any new user.

All heat only boilers come with a full **2-year warranty** from the date of registration (registration must be completed within the first 45 days of purchase) unless purchased with a promotional warranty. The warranty relates to any manufacturing defects and covers the replacement of any faulty parts and labour costs during the first 2 years, the balance of the warranty is parts-only. The warranty will not cover damage to the boiler through poor installation, and any consequent water damage or leaks into the boiler - All plumbing must be checked before the boiler is left with the end user for normal operation and water tightness. The warranty will not cover charges that have not been organised by Strom Ltd.

This appliance is not intended for use by anyone (including children) with reduced physical, sensorial or mental capacities, or lack of experience with the appliance, unless they have been given supervision or instruction by a competent person responsible for their safety.

This electric boiler must be fitted in accordance with the following: -

- The local building regulations
- UK building regulations

BS EN 12828

Heating systems in buildings: Design for water-based heating systems.

BS EN 12831

Heating systems in buildings: Method for calculation of the design heat load

BS EN 14336

Heating systems in buildings: Installation and commissioning of water-based heating systems

BS7671

Requirements for electrical installations. IEE Wiring Regulations. Nineteenth edition

BS EN 7593

Code of practice for treatment of water in heating systems

1. Load Check

- A load check should be taken into consideration when installing high output boilers

2. Central heating design

- Detailed recommendations are provided in BS EN 12828 and BS EN 6700

3. Location

- The boiler can be installed in almost any location, but consideration should be given to the potential of frost or damp conditions, and to the future maintenance of the equipment. Clearance should be allocated for the removal of the front panel if necessary and for air flow into the boiler. The boiler must be installed in an upright position, failure to do so will invalidate the warranty. The wall where the boiler is being sited should be strong enough to support the weight of the boiler when full. The surface to be mounted on should be made of non-combustable materials and have a heat tolerance in excess of 100°C.

BY FITTING THIS BOILER YOU AGREE:

- YOU HAVE CARRIED OUT ALL HEAT LOSS CALCULATIONS ON THE PROPERTY AND ARE SURE THAT THIS BOILER IS SUITABLE FOR THE APPLICATION. OVERSIZING THE BOILER MAY LEAD TO PREMATURE FAILURE NOT COVERED BY THE WARRANTY.
 - PART L 2022 OF THE BUILDING REGULATIONS CLEARLY STATE THAT BOILERS CAN NO LONGER BE SIGNIFICANTLY OVERSIZED.
 - DO NOT REPLACE AN OLD BOILER WITH THE SAME SIZED NEW ONE, ELECTRIC BOILERS ARE 100% EFFICIENT AND OLD BOILERS MAY HAVE BEEN OVERSIZED.
 - DO NOT SIZE ACCORDING TO WATER NEEDS, SIZE ACCORDING TO HEATING AND LOOK TO SEE IF THE WATER FLOW RATES ARE ADEQUATE, IF NOT AN ELECTRIC COMBI MAY NOT BE THE BEST SOLUTION FOR YOUR NEEDS.
- YOU HAVE CARRIED OUT VOLTAGE AND LOAD TESTS TO DETERMINE THE CORRECT SIZED BREAKER & CABLE ARE USED.
- THAT THE BOILER IS FITTED IN A MANOR AND LOCATION WHERE IT CANNOT BE ACCESSED BY UNAUTHORISED/UNQUALIFIED PERSONS.
- TO BE BOUND TO THE TERMS AND CONDITIONS ON THE LAST PAGE OF THIS MANUAL.
- THE BOILER HAS BEEN RECEIVED IN GOOD CONDITION.
- AN ELECTRICAL CERTIFICATE WILL BE PROVIDED IMMEDIATELY AFTER A LIVE CONNECTION HAS BEEN MADE TO THE BOILER, THIS IS A CONDITION OF THE WARRANTY. PART P REGULATIONS CLEARLY STATE THAT WHEN ANY NEW CIRCUIT OR ALTERATION TO AN EXISTING CIRCUIT HAS OCCURED A CERTIFICATE MUST BE PROVIDED.
- A PART P CERTIFICATE WILL BE ISSUED IN ACCORDANCE WITH BUILDING REGULATIONS UK. BOILERS REGARDLESS OF FUEL TYPE ARE CLASSSED AS NOTIFIABLE WORKS. THE INSTALLATION OF THE ELECTRICAL CIRCUIT TO THE BOILER IS ALSO NOTIFIABLE WORKS.

Electric Boilers

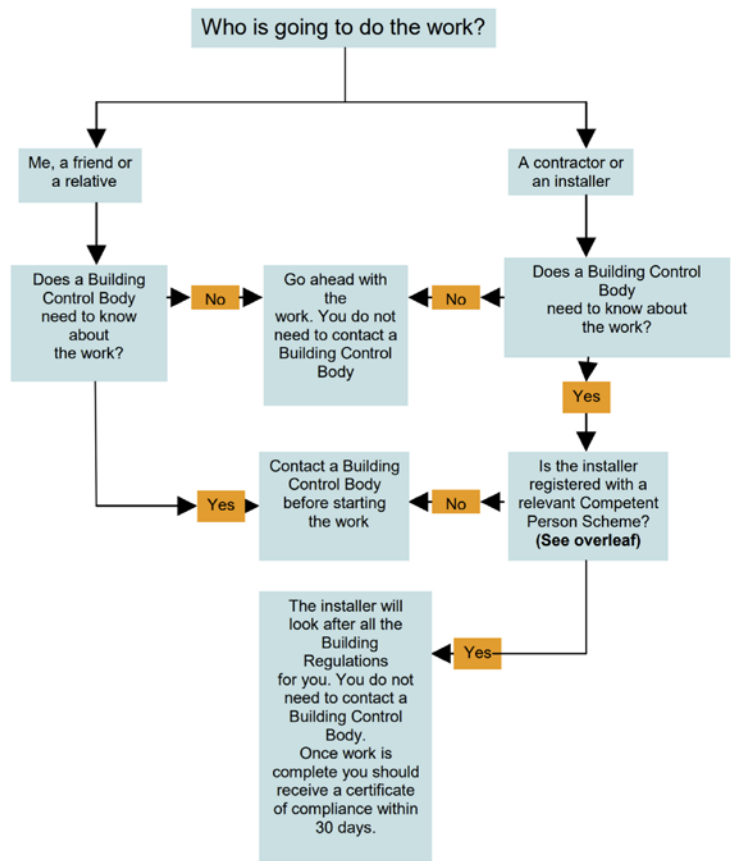

STAYING COMPLIANT

When installing an electric boiler it is important to pay attention to all national and local laws and by-laws to make sure that you are safe and your installation is compliant.

Installations of electric boilers should only be completed by qualified electricians who are members of a competent persons scheme. It is a requirement in law and of the schemes that an electrical installation certificate is provided for electric boiler installs as this will class as a “a new circuit or significant alteration of an existing circuit”.

Building regulations also stipulate that boiler installations regardless of fuel type are notifiable by law. The easiest way to comply is to use a competent person who in addition to the electrical installation certificate will need to legally provide you with a Part P certificate.

Below is an extract from the Department For Communities & Local Government showing what is required:

Remember even as the homeowner it is your job to ensure that your property complies with this law. Failure to do so may result in legal fines being levied, insurance policies being cancelled, and possible prison sentences. Selling your house may also prove difficult without the correct paperwork in place.

For more information about the requirements for electrical works being carried out look at a competent persons scheme website like:

www.NICEIC.com

Or check out the building regulations approval site at:

<https://www.gov.uk/building-regulations-approval>

Electric Boilers

BOILER SPECIFICATION

	SINGLE PHASE BOILERS (230V)			
Product Code	SBSP6H	SBSP9H	SBSP11H	SBSP15H
Heat Output	6kW	9kW	11kW	14.4kW
Amps at 230VAC	26A	41A	48A	62A
Minimum Breaker Size	32A	45A	50A	63A
Minimum Cable Size	2.5mm ²	6mm ²	10mm ²	10mm ²
Heating Temperature Range	20°C - 80°C			
Heating Pressure Range	0.5 - 1.5 Bar			
Heating Flow & Return Size	3/4" Male (We recommend flexi hoses or push fit irons)			
PRV Connection Size	15mm Compression			
ERP Rating (Heating)	D	D	D	D

Electric Boilers

INSTALLATION SCHEDULE

Please ensure that all steps of the installation schedule are carried out in this order, and only this order. Failing to carry out the installation in this order may result in damage to the boiler and incorrect function of the system.

PRIOR TO INSTALLATION

1. HEAT LOSS CALCULATION.

Correctly calculate the correct size unit for the properties heating demand. We regret to inform you that after installation there is no way to boost the output of the unit so it is important you get the correct unit for the property. Strom are unable to assist with these calculations.

2. PUMP & EXPANSION CALCULATION

Strom Heat Only Boilers do not feature internal expansion, pumps or relief valve, you should ensure that a suitable vessel and pump has been specified and fitted. It is recommended that you use a sealed system kit incorporating Heating Vessel, Pressure Gauge, and Relief Valve, if not please make sure all these items are individually accounted for in the installation.

3. VOLTAGE & LOAD CALCULATION.

Typically the UK single phase supply is 230V, all our technical data is based on this, however you should do a measurement and correctly determine the correct input voltage, this will determine the size of breaker required. All our breaker recommendations are only that, and should be checked against your requirements.

Strom Electric Boilers are fixed resistance devices, as a result as Voltage goes up so too does the draw of the appliance, all our boilers are rated at 230V therefore any variance from this must be taken into account when calculating the correct breaker and cable size.

All of these considerations must be made prior to at least installation but preferably before purchase is made. Regretably once the box to the boiler has been opened we are unable to accept returns of the product unless the product is faulty or does not operate as advertised by Strom.

IMPORTANT

It is important that once you start installing the boiler you do not leave it unattended with power connected or water in the circuits unless the whole installation and all steps have been completed. If you intend to leave the boiler unattended without completing the installation you should ensure that no leaks are present or possible, and that the electric have been isolated.

INSTALLATION

1. COMPLETE SYSTEM PIPING.	SEE PAGE 12
2. WALL MOUNT THE BOILER.	SEE PAGE 23
3. CONNECT, FILL & FLUSH BOILER	SEE PAGE 25
4. CHECK ALL WATER CONNECTIONS	SEE PAGE 28
5. MAKE ELECTRICAL CONNECTION	SEE PAGE 29
6. WIRE AN EXTERNAL THERMOSTAT	SEE PAGE 30
7. CHECK ELECTRIC CONNECTIONS	SEE PAGE 31
8. POWER ON THE BOILER	SEE PAGE 32

DISPLAY INFORMATION

RESERVED FOR FUTURE UPGRADE

This Icon is currently reserved in case of future update to the unit made by Strom.

HEAT REQUIRED

This Icon means that the boiler has a thermostat connection and it is currently calling for heat.

HEATING ELEMENT ON

When this Icon is lit the heating element inside the boiler is active. This lit can only be lit when the heating required and pump indicators are active.

FROST PROTECTION

This boiler features simple frost protection and is designed to protect the boiler. Where a boiler is to be used in an unheated room an external frost stat should be connected inline with the manufacturers guidance.

SET TEMPERATURE REACHED

The boiler has now reached the target temperature when this indicator is lit, the symbol will continue to show until the temperature differential set in the boiler has been met.

PUMP INDICATOR

The pump indicator will flash when it is expecting a flow from the external pump, if the indicator is lit steady then the boiler has detected an ample flow from the external pump.

DECREASE

Electric Boilers

SYSTEM PIPING

The boiler must be installed by a competent and certified plumber or heating engineer and systems should be designed to meet the current building regulations in force at the time of installation.

Strom Limited are not responsible for faulty installations which are performed by unqualified tradespeople.

DESIGN NOTES:

ISOLATION VALVES:

For ease of removal from the system full bore isolation valves should be fitted on the flow and return pipework from the boiler. Do not use standard ball valves, as this can restrict the flow in and out of the boiler and result in detrimental performance.

AUTOMATIC AIRVENTS

An automatic air vent should always be fitted at the highest point in a system to aid in purging the system of any air, it may also be necessary to install more than one depending on the pipework lay out.

AUTOMATIC BYPASS VALVE

An automatic bypass valve is integral to any system and **MUST** be installed as part of this installation. The ABV should be fitted to begin opening as the first valve, radiator, or actuator shuts in the system, this stops excess pressure from building in the system on the flow side. Failure to fit and set the ABV can result in poor performance and premature boiler failure.

WATER CONNECTIONS

For filling the heating system, reference should be made to BS EN 14336. There must be no connection between the central heating systems and the main water supply, and all local water bylaws must be observed. Any connection made between the mains water and heating system must be disconnected after use.

WATER PURGES

Install purges in the radiators and any high points in the heating system to aid in removing air.

DRAIN POINT

A drain point should be fitted at the lowest point of the heating system. It is not acceptable to drain the boiler through a safety valve as debris can prevent the correct operation of the valve.

HEATING EXPANSION VESSEL, RELIEF VALVE & PRESSURE GAUGE

It is important that the installer fit and supply all three items in conjunction with this installation. The Expansion Vessel must be sized in accordance with the Vessel Manufacturers recommendations. Failure to fit any of these three items may cause failure of the boiler and render warranties and guarantees null and void.

Remember to include:

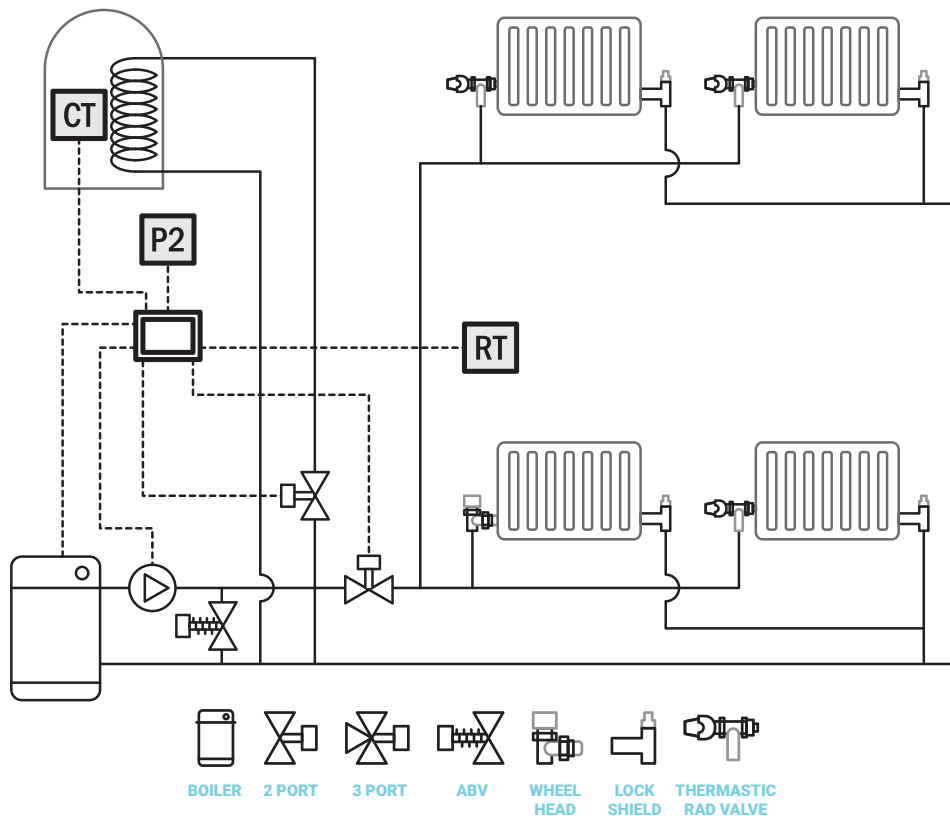

Heating Vessel, Pressure Relief Valve(s), Airvent(s), Pump(s), Drain Off(s), & Pressure Gauge.

WALL MOUNTING THE BOILER

IMPORTANT

When choosing a location to mount the boiler it is important that you consider clearance, servicing the boiler, and safe and suitable operation.

The boiler should be fitted out of the reach of children, people of diminished responsibility, and people who may otherwise access the boiler internals without the proper skills and qualifications as opening the boiler should only be done by a qualified electrician after first isolating the electrical supply. If there is the possibility that the boiler could be opened without first isolating the electrical supply then you must install it in a fashion that prevents access to the boiler, such as a lockable cupboard.

In terms of clearance strom recommend at least 100mm from all fixed obstructions on all sides of the boiler.

Please ensure that the designated wall for mounting the boiler has the structural integrity to support the unit when full. The following guidance is provided for sound solid brick wall mounting, your mounting may vary. The mounting surface should be made of a non combustible material rated to in excess of 100°C.

1. Using a drill create 6 holes as per the including wall mounting diagram. The upper holes should be $\Phi 8$ diameter, and the lower holes $\Phi 6$.
2. Secure the 3 supplied $\Phi 8$ expansion bolts into the top three holes.

Electric Boilers

WALL MOUNTING THE BOILER

3. Hang the boiler from the top three bolts before securing the boiler to the wall using standard fastenings at the bottom.

4. Please make sure that the boiler is now firmly fixed in position and unable to move. Failure to secure the boiler may cause damage to the wall and boiler in the future.

MAKING CONNECTIONS:

- The connections for flow and return must be carried out according to the colour scheme and labelling marked on the boiler.
- The connections for mains water inlet and outlet must be carried out according to the colour scheme and labelling marked on the boiler.
- When tightening or loosening threaded connections, always use suitable tools such as open-end adjustable spanners. Do not use pipe wrenches, extensions or unsuitable tools that may cause damage or water leaks.
- High temperature flexible hoses are recommended for all connections, however if you are using irons please ensure that you secure both connections and do not apply more torque than necessary as you may split in the internal pipework of the boiler or weaken it, both will render the warranty void and increases the chances of a leak that would not be covered by the warranty.

HEATING FLOW & RETURN:

These connections are $\frac{3}{4}$ " for connection to 22mm pipe. Suitable diameter service valves should be installed at the flow and return to allow the boiler to be isolated for maintenance without draining the entire heating system. We recommend flexi-hoses as overtightening irons may damage the boiler internals which is not covered under warranty.

Electric Boilers

FILLING & FLUSHING

FLUSHING:

The system must be flushed to 10% of mains PPM (chloride and otherwise) or lower to ensure that the water system is not detrimental to the lifespan of the boiler. If the boiler is being installed into an existing heating system, a power flush must be carried out on the radiators and pipework to remove any potential debris.

HEATING SYSTEM INITIAL FILL:

Ensure that both flow and return isolation valves fitted as part of your installation are fully open. With the filling loop in your system connected open the valve fully and allow the system to fill slowly until the pressure gauge reads between 1 and 1.5 bar, at which point the valve should be shut. Ensure that you add inhibitor to your system, refer the manufacturers guidance for dilution rates. For the moment please leave the filling loop connected until you have purged the air out of the system.

CHECK WATER CONNECTIONS

It is important not only to check for leaks on the pipework installed by yourself, but also to check the internals of the boiler for any leaks over a few hours after installing the boiler.

Every boiler is pressure tested inside our factory however after a long journey and installation it can sometimes be necessary to tighten connections when water escapes occur. Please do not unnecessarily tighten connections, or over tighten them, only as required in the few hours after initial installation.

If you are unable to check for leaks in the few hours after installation please drain down and only fill the system again when you have the time to do so.

Electric Boilers

ELECTRICAL CONNECTIONS

POWER SUPPLY:

The supply cable to the boiler should be of sufficient size to carry the load capacity required. It should be wired through a linked isolator switch with minimum contact gaps of 3mm in every pole, and the system protected by a suitably rated circuit breaker.

It is essential that the boiler is properly earthed, and the wiring tested to current IEE regulations.

The following table shows the specification for the full selection of Strom Boilers, please check carefully your model and read off from the table below. Calculations should always be done to ensure that the information is correct for your circumstances, as variances in installations can change the breaker size and or cable size, for instance voltage varies from property to property and does not necessarily follow any regional variances.

Rated Boiler Output	6kW	9kW	11kW	14.4kW
Single / Three Phase	Single	Single	Single	Single
Rated Voltage	230VAC	230VAC	230VAC	230VAC
Current (A) @ Rated Voltage	26	41	48	62
Minimum MCB/RCB (A)	32	45	50	63
Minimum Cable Size (mm²)	2.5	6	10	10

The terminal connection block is at the top right-hand side of the boiler and is accessible via the removal of the front panel. The supply cable should be safely routed to this point through the cable entry point at the top of the right-hand panel of the boiler.

Ensure the connection cables are correctly wired into the correct terminals and are securely in position.

Remember an electric boiler is a fixed resistance device, if the voltage goes up so to does the draw. This will need to be accounted for in the sizing of the cable and breaker.

EARTH LEAKAGE DESIGN:

When designing your system please be aware that this product can produce a high level of intentional earth leakage for it to work correctly. If you are fitting an RCD in conjunction with this product it is important to take this in to account. If you see persistant tripping on the RCD then take a measurement of the earth leakage. You may be required to provide this boiler with its own independant RCD or alternatively you may be required to design your system in such a way that an RCD is not required.

CABLE TYPE:

For ease of installation Strom always recommend a multi strand high temperature flexible cable such as H07 cable, please consult your electrical distributor, and always make sure that size of cable is correct for the number of amps used as different cables can have different ratings at different core sizes. Please remember to check the manufacturers specific current carrying capacity of the cable you have chosen to install.

Electric Boilers

CONNECTING EXTERNAL THERMOSTAT

Because no programming or temperature control can be done by the boiler itself it is necessary to fit an external thermostat. It is recommended that you fit time and temperature control in the form of seperate programmer and thermostat(s) or in the form of all in one programmable thermostat(s). More information can be found on system types on page 11.

The following information is provided as a guide only and refers to Strom manufactured heating controls, however you should follow the guidance of the manufacturer when connecting the thermostat to the Strom Boiler. We regret that we cannot offer any wiring advice of competitor products, and can only refer in those circumstances to the connections on our boiler.

BOILER WIRING:

The PCB control board for the heating circuit is located in the right hand side of the boiler between the pump and the main electrical supply point.

- | | |
|----------------------------|------------------------------|
| 1. Terminal Block | 6. Return Temperature Sensor |
| 2. 6 Amp Fuse | 7. Heating Flow Sensor |
| 3. Traic Control | 8. Buzzer |
| 4. Display Connection | 9. Power Supply |
| 5. Flow Temperature Sensor | |

THERMOSTAT WIRING:

(Provided as an example using Strom Programmable Thermostat)

The switch live signal on the boiler must be wired in such a way that the heating zones are fully opened before activating the boiler, this could be via a microswitch on an actuator or using a time delay relay if a microswitch actuator is not available.

PUMP WIRING:

The heating pump for the system must be wired as per the board diagram above.

All wiring must be carried out in accordance with current IEE BS7671 wiring regulations.

All electrical connections must be made by a qualified electrician.

Electric Boilers

CHECKING ELECTRICAL CONNECTIONS

It is important before powering on the boiler for the first time that all electrical connections are checked, this is not only your own connections but also the factory made ones too. Whilst all factory made connections are tested at the factory it is possible that during transit or installation connections may have come loose.

For Screwed connections please check for cable movement and tighten with a Screwdriver if necessary and for ribbons and push plastic connectors please gently apply pressure to make sure they are firmly seated. Please check the following connections:

1. The main power supply connections to the unit, both installer and factory made.
2. The spade connections labelled as number 9 on the PCB control board opposite.
3. The thermostat connections labelled as number 1 on the PCB control board opposite.
4. Push connectors labelled 3 - 7 if present on the PCB control board opposite.
5. All terminations on the heating element (these are the braided connections).
6. All connections made on the PCB above the heating element (these are braided connections).
7. All earth terminations both factory made and installer made.

IMPORTANT

Before powering on the boiler for the first time please make sure you have completed the following:

1. All aspects of the manual proceeding this section have been completed as instructed.
2. The fitted thermostat or programmer is set to the off position, or where off is not possible the thermostat is set to the lowest possible temperature.
3. Make sure that the boiler casing front panel is secured.
4. The boiler can now be powered on by activating power at the breaker in the consumer unit. The boiler will initially power on in standby mode. The power button will bring the boiler out of standby mode, but for the time being leave the boiler in this mode so that the boiler settings can be configured.

Electric Boilers

SET THE BOILER PARAMETERS

The boiler has 2 key parameters that need to be set in order to make the boiler function correctly:

BOILER FLOW TEMPERATURE

This should be set to the design temperature of the heating system, in many cases on existing properties with standard radiator systems 65°C will be correct, however underfloor heating systems and low temperature radiator systems may be as low as 35°C. If this is not adjusted on set correctly the boiler may cycle and experience overheating problems. If a hot water cylinder is present most systems would be remain set at 65°C

BOILER DIFFERENTIAL

When the boiler finally reaches the flow temperature set on the boiler the heat exchanger will turn off to allow heat to dissipate in the system. It will only fire again when the temperature drops by the number degrees set in this setting. For example if FLOW is set as 65°C and DIFF is set as 15°C when the boiler flow hits 65°C it will not reactivate until 50°C is reached.

CHANGING THE SETTINGS:

To change the boiler target flow temperature settings, **with the boiler still in the standby position** press the Menu button (see page 9) the Heat Required Icon should not light up, using the up and down button press set the required temperature in degrees celcius.

Pressing the Menu button again will cause the Target Temperature Reached Icon to light up, here you can set the temperature differential.

You can continue to cycle between these two options to change the settings as required.

Press and hold the power button for a few seconds waiting for the boiler to beep and for the Admin menu to be exited.

Electric Boilers

SET PUMP SPEED & PURGE AIR

Before moving the boiler out of standby mode please check and complete the following actions:

1. The boiler has been properly configured in the previous step.
2. Your airvents in the system are open
3. Set your pump speed according to system design and manufacturers instructions.

The boiler can now be activated, press and hold the power button until the boiler bleeps and exits standby mode.

Activate the thermostat so that it is now calling for heat, the Heat Required symbol should now be lit and your external pump should have fired.

While the pump is running you should begin to purge all air from the system by bleeding all radiators and airvents in the system. Once bled the system should run almost silently with very little noise coming from the boiler or pump. Once all air is purged you can begin to alter the pump speed to suit your needs, normally a 15 to 20 degree differential between the flow and return is desirable, and the pump speed can be increased or decreased to achieve this differential.

You should also now take the time to set the Automatic Bypass Valve on the system, with all TRV's on the system open and the pump set at the correct speed set the Autobypass Valve to only just closed, now confirm you have the correct setting by closing only one of the TRV's, the bypass valve should now start to allow small amounts of water to pass.

Finally now that all the air has been purged from the system check the final pressure reading of the heating circuit, and top up if required. Once set please disconnect the filling loop, and ensure that all connections are capped off until required again at a future date.

Electric Boilers

TESTING HEATING

Before completing the installation checklist please take the time to check the Heating Circuit. This final check is important to ensure that you do not have to reattend site at a later date to correct any issues.

HEATING TEST

1. Set the thermostat to a temperature approximately 4-5 degrees above current room temperature and ensure that the boiler fires.
2. Leave the boiler running for several minutes and check that the radiators are beginning to get warm.
3. After approximately 15 minutes check the temperature differential between the flow and return is approximately 15 to 20°C, if not please refer to setting the pump speed on page 34.
4. Wait until the thermostat reaches temperature and deactivates the boiler.
5. Now set the thermostat 4-5 degrees higher and waiting for a few minutes check to see if the boiler successfully fires again.
6. Return the thermostat to its required position to complete testing.

	Faulty temperature sensor for heating outlet.	Call Strom on 0333 344 24 74
E2	Loose connection between the heating return temperature sensor & PCB	Check the wiring and reseal connection if loose.
	Faulty temperature sensor for heating return.	Call Strom on 0333 344 24 74
E3	Heating system flow temperature overheating.	Check that there is sufficient system circulation. If the boiler has been set for temperatures in excess of 75°C please reduce to between 70 & 75.
E4	Heat exchanger overheating.	The boiler will automatically begin circulating again once the heat exchanger has cooled.
E5	Inadequate Flow	The boiler requires a minimum flow rate of 3lpm, please check: <ul style="list-style-type: none"> • Pump Speed • Air in the system • ABV is installed & set • There is no blockages in the inlet and return line strainers
EA	Power supply to the boiler is too high.	<ul style="list-style-type: none"> • Check supply voltage & correct. • Re-check all wiring to the unit.

Electric Boilers

FAULT FINDING

ERROR CODE	POTENTIAL CAUSE	SOLUTION
Display is not illuminated.	No power to the boiler.	Add treated water to the heating system and bring the pressure to a suitable level.
	Loose connection between display board and PCB.	Reseat connection.
Control panel is not registering touch commands.	Ensure boilers status is correct for the function you require.	As per page 33 of this manual to adjust time, heat settings and boiler functionality the boiler needs to be in standby mode before the menu and arrow buttons will work.
Heating temperature is increasing too slow or not at all.	Thermal cut outs have triggered and need resetting.	Isolate power to the boiler and reset thermal cut outs by pressing firmly against the grey buttons in the centre of the component. These cut outs are located on the left hand element as shown on page 8 and 9 (figure 2)
	Heating function has been turned off.	Turn heating function back on as per information on page 33.
	Boiler is not recognising a thermostat calling for heat or a thermostat has not been installed.	<ul style="list-style-type: none"> • Install a thermostat. • Thermostat is not wired correctly or is defective (Please check the manufacturers manual for confirmation. Strom can only advise on how to wire into the boiler but not advise the wiring into third party products) • Fuse on control circuit has blown. The fuse location is shown on page 30 (figure 2) replace with 6 amp fuse.
Heating is turning off at a low temperature.	Default heating temperature requires to be adjusted.	Please follow the instructions on page 33 for information on how to adjust your default heating temperature.
Nuisance tripping (internal or external breaker)	Loose electrical connection.	This may be a connection made during installation a pre factory made connection. Please check all connections and ensure they are tight and secure.
	Incorrect cable size and/or external breaker used for installation.	Please double check that the specification of your installation is correct. As stated on pages 2 and 29, ultimately the voltage at the installation will influence the external breaker and cable size required for this installation. Use ohms law to calculate if the correct specifications have been applied to the installation. Adjust accordingly.

STROM BOILERS DO NOT REQUIRE PARTICULAR MAINTENANCE OTHER THAN THE FOLLOWING:

The heating system must be filled and maintained when the water is cold, between a pressure of 1 – 1.5 bar. Frequent refilling of the system can cause scaling, corrosion and damage to a heating system and should be avoided wherever possible. Regular pressure loss could be indicative of a leak within the system and should be investigated. When the system is refilled always check the level of inhibitor in the system and re-fill where necessary.

UNDER NO CIRCUMSTANCES SHOULD THE BOILER BE SWITCHED ON WHEN THE SYSTEM IS DRY.

The boiler contains an installed frost-protection program. For this to operate, power must be supplied to the boiler at all times. Anti-freeze can be added to the heating system (no more than 20% by volume) if the boiler is going to be stood unused for long periods of time. Otherwise, the boiler should be disconnected from the electricity supply and the system fully drained to avoid any frost damage.

Electric Boilers

WARRANTY INFORMATION

All Strom products are supplied in accordance with standard Terms & Conditions (available on request or via our website). This Policy also applies in addition to our terms and conditions to any Strom Electric Boilers and by fitting this product you are agreeing to be bound by these Terms & Conditions and this Policy. This Policy sets out the Warranty Period and exclusions which apply to Electric Boilers, for other products please see our website or their corresponding manuals. This Policy is subject to our Standard Terms and Conditions and should be read in conjunction with those terms. We reserve the right to amend this policy at any time.

Warranty Details:

Subject to the exclusions set out below and any applicable points in our Terms and Conditions, faulty parts and products will be replaced or repaired free of charge by Strom, or one of its representatives during the applicable Warranty Period. Where work is carried out by personnel not associated with Strom, or without Strom's knowledge we will be unable to cover the associated costs, parts, and labour charges. If Strom or its representatives are unable to attend your property in a timely manor we reserve the right to allow third parties to undertake the work once a pre-agreed cost has been agreed with Strom directly (agreements via third parties will not be accepted).

Exclusions:

1. This policy only applies where:

- i. The product is installed and used strictly in accordance with the Terms and Conditions and the instructions supplied with the product; and
- ii. the failure is not due to accident, misuse, abuse, unsuitable water conditions (including contaminants or inappropriate water pressure), limescale build up, or to any alteration, modification or repair by any party not expressly nominated by Strom.
- iii. Unsuitable water conditions include:
 - a) Private water supplies that are not regulated by water authorities
 - b) Hard water that is left untreated
 - c) Water additives that lead to product corrosion
 - d) The absence of corrosion inhibitor in heating circuits

2. This warranty does not cover damage resulting from non-operation of the product or consequential damage to any other goods, furnishings or property.

3. This warranty does not apply to any consumables associated with the product.

4. Installations that have not been carried out by person/s that do not hold the relevant qualifications required in their field to carry out the works undertaken (we reserve the right to ask for a copy of the electrical installation certificate)

5. Warranties are non-transferable and must be purchased as new from one of our distributors.

Warranty Periods:

All Strom Boilers comes with a standard out of box warranty of 1 year, however by completing the included promotional guarantee procedure within 45 days of purchase (please see warranty documentation) the warranty will be extended to the offered promotional duration free of charge. The promotional period may vary dependent on supplier, model, or package purchased. All details set out in the included warranty documentation.

INS

CONDITIONS OF SALE

1. DEFINITIONS

"Buyer" means the person who accepts a quotation of the Company for the sale of the Goods or whose order for the Goods is accepted by the Company

"Company" means Strain Limited.

"Conditions" means the terms and conditions of sale set out in this document and any special terms and conditions agreed in writing by the Company and the Buyer

"Contract" means the contract for the purchase and sale of the Goods

"Goods" means the goods which the Company is to supply and which the Buyer agrees to buy in accordance with these conditions

"Price" means the price for the Goods including transport and insurance (if any)

1.2 Any reference in these Conditions to any provision of a statute shall be construed as a reference to that provision as amended-revoked or extended at the relevant time

1.3 The headings in these Conditions are for convenience only and shall not affect their interpretation

2. BASIS OF SALE

2.1 The Company shall sell and the Buyer shall purchase the Goods in accordance with:-

2.1.1 the Company's quotation (if provided by the Company and accepted by the Buyer), or

2.1.2 (if the Company does not submit a quotation and following a request or purported order from the Buyer for Goods) in accordance with the Company's offer to the Buyer (if accepted by the Buyer) subject in either case to these Conditions, which shall govern the Contract to the exclusion of any other terms, subject to which any such quotation or offer is accepted, or purported to be accepted.

2.2 Any variation to these Conditions (including any special terms and conditions agreed between the parties) shall be inoperative unless agreed in writing by the Company

2.3 Any advice or recommendation given by the Company or its employees or agents to the Buyer or its employees or agents as to the storage application or use of the Goods which is not confirmed in writing by the Company is not followed or acted upon at the Buyer's own risk and accordingly the Company shall not be liable (for any such advice or recommendation which is not so confirmed).

2.4 Any typographical clerical or other error or omission in any sales literature (quotation price list including advertisement) issued by the Company shall be corrected by the Company shall be subject to correction without any liability on the part of the Company

2.5 All specifications, drawings, particulars of weight and dimension and performance data contained in any of the Company's literature are approximate only.

2.6 The Company reserves the right to improve and/or modify any specifications, designs and dimensions without notice.

2.7 For the avoidance of doubt nothing in these Conditions or any Contract shall confer on any third party benefit nor the right to enforce any of its terms. The Conditions or any Contract whether pursuant to the Contracts (Rights of Third Parties) Act 1999 or otherwise

3. THE PRICE AND PAYMENT

3.1 The Price shall be either:-

3.1.1 the Company's quoted price which shall only be valid for 30 days from its date of issue after which time the Price may be altered by the Company and shall be subject to the Company's quotation; or

3.1.2 where no price has been quoted the Price listed in the then current price list.

3.2 The Company shall bill the Company to the Buyer from time to time.

3.2.1 Except as otherwise stated in the Company's quotation or in any price list of the company or otherwise agreed in writing between the Company and the Buyer, all prices are given by the Company to include the Company's charges for transport and insurance.

3.3 The Price and any other sums payable by the Buyer to the Company is exclusive of any applicable Value Added Tax, which the Buyer shall be additionally liable to pay to the Company.

3.4 Subject to any special terms agreed in writing between the Buyer and the Company, the Company may invoice the Buyer for the Price of the Goods on or at any time after delivery of the Goods, (or any instalment of the Goods) unless the Goods are not for collection by the Buyer or the Buyer would not be liable to take delivery of the Goods, in which event the Buyer shall be entitled to invoice the Buyer for the Price at any time after the Company has notified the Buyer that the Goods are ready for collection or (as the case may be) the Company has tendered delivery of the Goods.

3.5 Save as otherwise agreed in writing, payment of the Price and VAT shall be due within the agreed period from the date of the invoice without deduction or set off. Time for payment shall be of the essence

3.6 If the Buyer fails to make any payment on the due date then without prejudice to any other right or remedy available to the Company the Company's Bill shall be entitled to:-

3.6.1 cancel the Contract or suspend any further deliveries to the Buyer

3.6.2 appropriate any payment made by the Buyer to such of the Goods (or the Goods supplied under any other contract between the Buyer and the Company) as the Company may think fit (notwithstanding any purported appropriation by the Buyer) and

3.6.3 charge the Buyer interest (both before and after any judgement) on the amount unpaid at the rate of 8% per cent per annum above the base rate or the base rate from the time until payment in full is made (a part of a month being treated as a full month for the purpose of calculating it)

4. THE GOODS

4.1.1 The quantity and description of the Goods shall be as set out in the Company's quotation or in the Company's offer (as the case may be); and

4.1.2 the quality and condition of the Goods shall be as set out in the Company's quotation or (where there is no quotation) in the Company's literature and brochure for the Goods in question.

4.2 The Buyer shall be responsible for the Company for ensuring the accuracy of the terms of any order and any information supplied for the Company as to its requirements (including but without limitation the use to which the Goods will be put and any applicable specification) submitted by the Buyer and for giving the Company any necessary information relating to the Goods within a sufficient time to enable the Company to perform the Contract in accordance with its terms.

4.3 If the Goods are to be manufactured or produced it is to be applied to the Goods by the Company in accordance with a specification submitted by the Buyer

The Buyer shall indemnify the Company for any and all claims, damages or other demands, liabilities and expenses awarded or incurred by the Company in connection with or paid or agreed to be paid by the Company in settlement of any claim for infringement of the intellectual property rights of a third party or for patent or intellectual property rights of any other person which results from the Company's use of the Buyer's specification or from compliance by the Company with the Buyer's instructions without limitation to the following:-

4.4 No other right has been accepted by the Company may be cancelled by the Buyer except with the agreement in writing of the Company and on terms that any report paid shall not be repaid by the Buyer and that the Buyer shall indemnify the Company in full against all losses (including loss of profit costs (including the cost of all labour and materials) used damages and expenses incurred by the Company in carrying out any work in respect of the Goods or otherwise as a result of cancellation

4.5 All designs, sketches, or similar articles supplied by or submitted in confidence to the Company shall remain the property of the Company and may not be disclosed by or used by or copied or otherwise reproduced by the Buyer without the prior written consent of the Company.

5. DELIVERY OF GOODS

5.1 Unless otherwise agreed in writing the Company shall deliver the Goods to such delivery address as is specified in the Buyer's order or quotation or, if no such address as the Goods or part thereof (as the case may be) are ready for delivery.

5.2 The Buyer shall be responsible for offloading the Goods at such delivery address and shall advise the Company of any special requirements, delays or rules relating to parking or loading of vehicles at the delivery address.

5.3 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.4 Any dates quoted for delivery of the Goods are approximate only and the Company shall not be responsible for the delay in delivery of the Goods however caused. Time for delivery shall not be of the essence unless previously agreed by the Company in writing. The Goods may be delivered by the Company in advance of

the Delivery Date upon giving reasonable notice to the Buyer

5.5 Where the Goods are to be delivered in instalments each delivery shall constitute a separate contract and failure by the Company to deliver any one or more instalments in accordance with these Conditions shall not constitute a breach of the Contract. The Company shall not be liable to deliver any one or more instalments in respect of any one or more instalments shall not entitle the Buyer to treat the Contract as a whole as repudiated

5.6 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods. The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.7 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.8 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.9 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.10 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.11 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.12 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.13 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.14 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.15 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.16 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.17 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.18 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.19 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.20 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.21 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.22 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.23 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.24 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.25 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.26 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.27 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.28 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.29 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.30 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.31 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.32 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.33 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.34 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.35 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.36 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.37 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.38 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.39 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.40 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.41 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.42 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.43 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.44 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.45 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.46 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.47 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.48 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.49 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.50 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.51 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.52 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.53 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.54 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.55 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.56 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.57 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.58 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.59 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.60 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.61 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.62 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.63 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.64 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.65 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.66 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.67 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.68 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.69 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.70 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.71 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.72 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.73 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.74 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.75 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.76 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.77 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.78 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.79 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.80 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.81 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.82 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.83 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.84 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.85 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.86 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.87 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.88 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.89 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.90 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.

5.91 The Buyer shall be responsible for ensuring that access to the delivery address is wholly by a road with a surface capable of withstanding the weight and size of a vehicle carrying the Goods.
